

Stable Income Generator

Automated options income.
Deterministic authority. Public proof.

V13.5 QQQ wheel | Alpaca paper | Containerized

Income is a path-quality problem

Maximum upside and dependable income are different objectives.

STEADY

beats spectacular
when cashflow is the goal.

- 01 Generate repeatable premium**
Fully collateralized option expressions.
- 02 Adapt when QQQ trend changes**
One wheel, two deterministic postures.
- 03 Prove operation, not intention**
Broker telemetry, audit records, and replay.

One QQQ wheel. Two market postures.

The prior close versus its prior 50-session SMA changes strike distance - not discretion.

UPTREND

1% OTM put

3% OTM covered call

Collect put premium nearer the rising market while preserving more upside room on calls.

DOWNTREND

3% OTM put

1% OTM covered call

Move puts farther away while bringing calls closer to monetize a cautious regime.

QQQ ONLY

7-14 DTE

1 CONTRACT

>15% PROFIT

2% DAILY STOP

Cash-secured puts and share-covered calls only

The backtest favors steadiness over beta

V13.5 gave up upside in exchange for a shallower booked-equity drawdown and stronger downside-adjusted return.

Exploratory in-sample proxy | 644 sessions | Jan 29, 2024 - Aug 24, 2026 | Not continuous mark-to-market

Participation in rallies. Resilience in selloffs.

One deterministic posture switch was tested across rising conditions and the four largest observed QQQ drawdowns.

BULL PARTICIPATION

V13.5 +43.43%

vs QQQ +37.05%

428 uptrend-labeled sessions

Conditional compounded return across sessions classified using information available before each decision.

10:01 ET	SELL TO OPEN	QQQ \$700 PUT	\$3.06

Captured Sep 2, 2026 at 7:13 PM EDT | Paper trading is simulated

AI can veto. Deterministic controls retain authority.

The model contributes context-sensitive restraint without gaining executable control.

No model-generated contract, size, price, or execution command.

CURRENT LIVE BOUNDARY

The V13.5 paper canary is deterministic-only. The hybrid gate is implemented and replay-tested in the broader platform.

Containers move the system without sharing authority

Config selects behavior; role boundaries constrain credentials, network access, and broker reach.

Same contracts. Same configuration. New host.

A working system, not a concept.

Inspect the evidence, replay the controls, and watch the paper account.

01 **BACKTESTED** 644 sessions with SPY / QQQ comparison

02 **OPERATING** V13.5 on Alpaca paper with public telemetry

03 **PORTABLE** Config-driven containers and PostgreSQL
